

# Bayou Sorrel Site (Iberville Parish) Louisiana

EPA ID# LAD980745541  
Site ID: 0600573

**EPA REGION 6**  
**CONGRESSIONAL DISTRICT 06**

**Contact:**  
**Laura Stankosky 214-665-7525**

**Updated: August 2006**

## Current Status

---

- The site is currently in operation & maintenance status. The routine annual ground water monitoring will continue to ensure protectiveness of the EPA cleanup actions. Additionally, annual inspections of the cap are conducted to ensure integrity.

## Benefits

---

- Over 1 million cubic feet of waste have been contained in a slurry-walled, multi-layered clay cap system. All contaminants have been contained and exposure potential has been eliminated.
- The remedy ensures protection of nearby sensitive environmental areas as well as protection of underlying aquifer used by thousands of people in the Parish.
- The remedy includes extensive monitoring to ensure protectiveness is maintained.
- The EPA continues to monitor the site to ensure that the site is safe and no longer poses a threat to public health or the environment.

## National Priorities Listing (NPL) History

---

NPL Inclusion Proposal Date:	December 30, 1982
NPL Inclusion Final Date:	September 8, 1983
NPL Deletion Proposal Date:	June 4, 1997
NPL Deletion Final Date:	September 29, 1997

## Site Description

---

Location: 20 miles SW of Baton Rouge, six miles north of the Town of Bayou Sorrel. Section 40-43, Township 10 South, Range 10 East, in Iberville Parish, Louisiana.

Population: Approximately 100 year round residents within 5 miles of site.

Setting: 50 acres of the 256 total site acreage used for wastes dumping. Site is surrounded by remote back swamp environment.

Hydrology: 75-125 feet of clays & silts beneath site. Below clays - sand, gravels & silts possibly to 700 ft. below land surface. This sand, silt and gravel layer is the Plaquemine aquifer. Ground water withdrawal from the Plaquemine aquifer is minimal, due to low population density and poor ground water quality.

## Wastes And Volumes

---

### Primary Contaminants:

Process wastes from pesticide/herbicide manufacturing.  
Sulfide containing wastes from hydrocarbon processing and exploration.  
Spent wash from boiler and process-equipment cleaning.

### Volume:

Approximately 1,000,000 cubic feet of contaminated soil and sediments.

## Site Map

---

## Health Considerations

---

Direct Contact: Human exposure to contaminated soil/sediment.

Ground Water: Human ingestion of contaminated source.

Surface Water: Human ingestion of contaminated source.

Same risks as above with respect to aquatic organisms and on site game animals.

## Record of Decision (ROD)

---

EPA signed the Record of Decision on November 16, 1986.

The ROD's remedy called for Geomembrane cap with slurry walls, gas venting systems, and ground water monitoring.

Remedy cost estimate: \$28,700,000.

The EPA will inspect the site at least once every five years.
